

Consumer Goods Ad-hoc Analysis

MySQL Portfolio Project | FY2024–FY2025 | U.S. Market

Sales • Products • Customers • Discounts • Manufacturing Costs

Lokesh Kancharla

Project Overview & Data Model

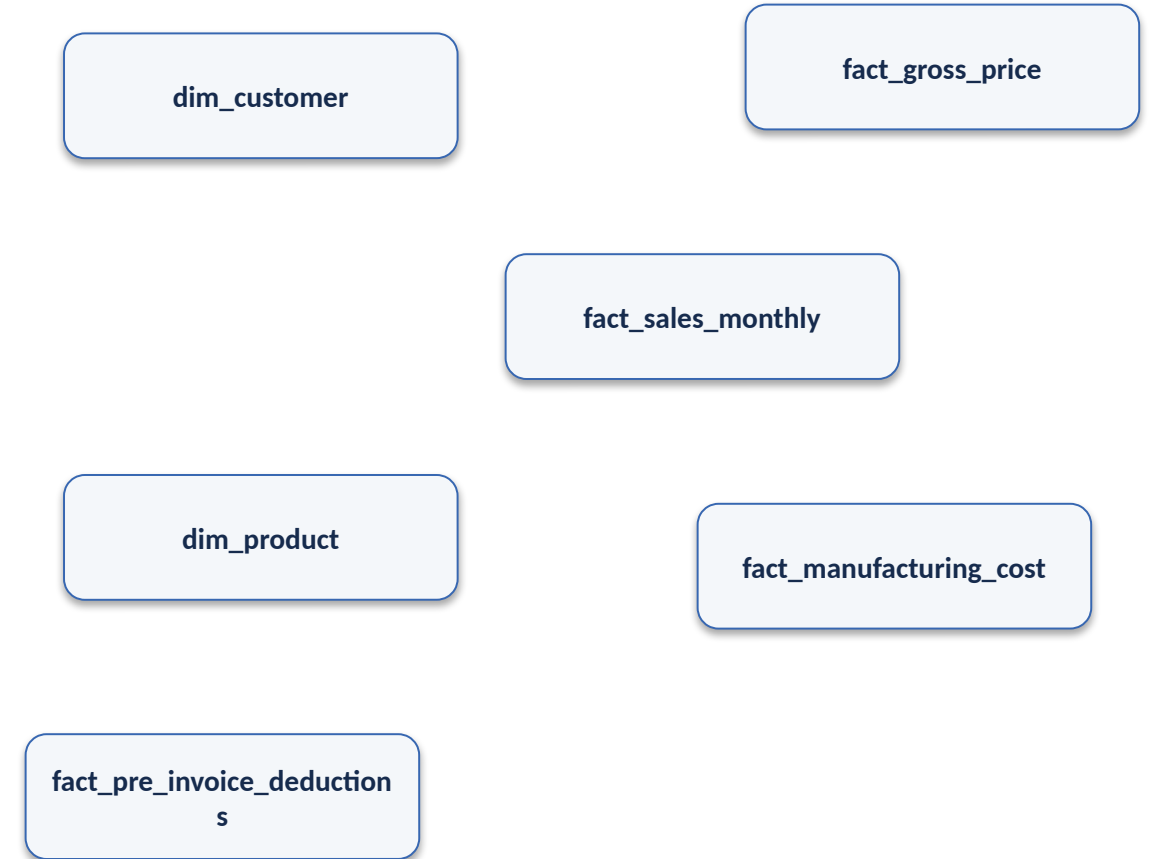

A simple dimensional model supporting two-year consumer-goods analysis

Objective: answer practical business questions using SQL and prepare the same model for Power BI.

6 tables: customer, product, monthly sales, gross price, manufacturing cost, and pre-invoice discounts.

FY2024 provides comparison history; FY2025 is the primary completed analysis year.

Core calculation: Gross Sales = Sold Quantity × Gross Price.

10 Business Questions Answered

The analysis moves from basic aggregation to CTEs and window functions

1. Gross sales by region

2. Product growth: FY2024 vs FY2025

3. Product count by segment

4. Segments that grew

5. Highest & lowest manufacturing cost

6. Customers with highest discounts

7. BestBuy monthly sales trend

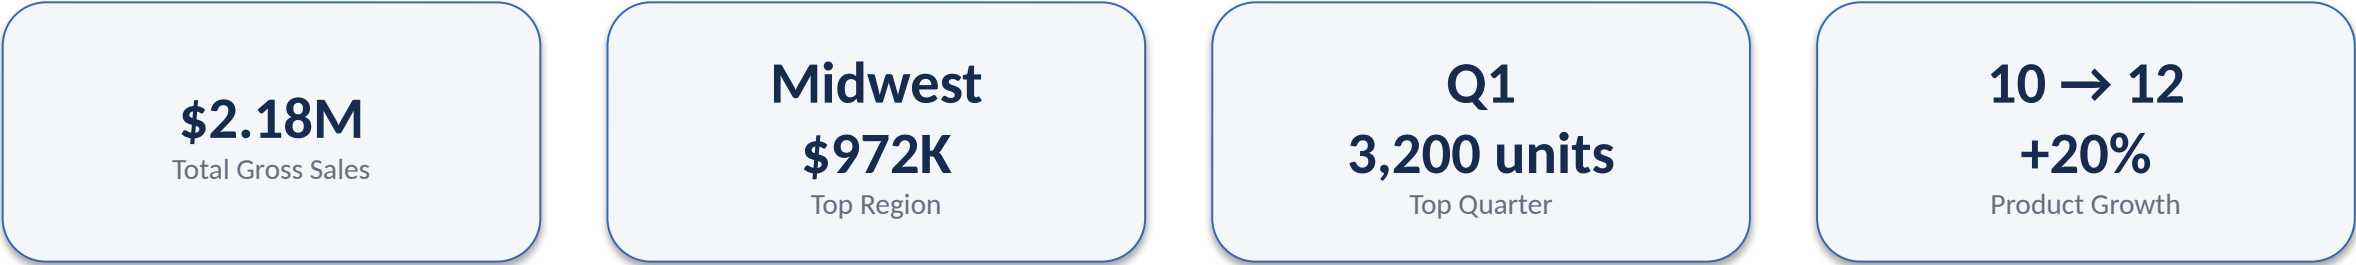

8. Highest-volume fiscal quarter

9. Gross sales contribution by channel

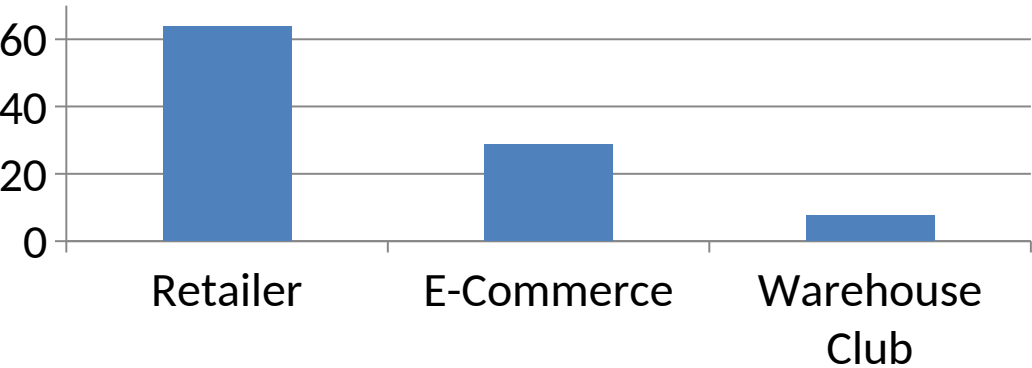

10. Top 3 products within each division

FY2025 Key Findings

Selected outputs from the SQL analysis

Gross Sales Contribution by Channel (%)

Highest manufacturing cost: Core Gaming Desktop — \$980

Lowest manufacturing cost: Pulse Mouse — \$12

Highest customer discount: Amazon — 8.70%

Retailer channel contributes 63.78% of FY2025 gross sales.

SQL Techniques & Next Step

The project is designed to be easy to explain in an analyst interview

INNER JOIN — connect sales to customer, product, and pricing information.

GROUP BY + SUM / COUNT — aggregate sales, quantities, products, and segments.

CASE — compare fiscal years and map calendar months to fiscal quarters.

CTEs + subqueries — organize product-growth and channel-contribution analysis.

DENSE_RANK() — identify the top 3 products independently within each division.

Next: build a one-page Power BI dashboard using the same six-table model.

Business story: Where are we making money? What is growing? What costs more? Who gets discounts? When and where do we sell most?
